Von Richard Crampton, Benjamin Crampton : Atlas of Eastern Europe in the Twentieth Century before purchasing it in order to gage whether or not it would be worth my time, and all praised Atlas of Eastern Europe in the Twentieth Century:

KundenrezensionenHilfreichste Kundenrezensionen0 von 0 Kunden fanden die folgende Rezension hilfreich. More than an atlasVon Marilyn J. BerryThis atlas has well written, thoughtful, and comfortably readable text. The authors' own interest in and knowledge of the history is evident. (Not everyone can write about historical demographics with enthusiasm.) The overall organization is chronological. Information is both global (focused on the entire Eastern European area as countries inter-relate over the years) and country by country (rather like snap-shots of individual countries at different times). The maps are black and white (same in hard and soft bound) but contain a lot of information, details, details!...right down to the battle lines on certain dates. There are so many maps and charts that printing in color would probably make the book incredibly pricey.0 von 0 Kunden fanden die folgende Rezension

hilfreich. Mapsquality Von Clemens Hoffmann Maps dont have a good quality in kindle, thats a pity for a Atlas. Thats why just 3 Stars, otherwise good book.

Kurzbeschreibung Marshalling 129 maps, numerous diagrams and incisive textual commentary, the Atlas of Eastern Europe in the Twentieth Century draws a definitive picture of the changing shape of Eastern and some of central Europe from the beginning of the twentieth century to the present, charting the emergence of a volatile world from the abrupt collapse of the communist system. An invaluable guide to a complex subject, this Atlas: * gives a general introduction to the physical, ethnic and religious composition of the region * includes summary maps of Eastern Europe in 1900, 1923, 1945 and 1994 * charts the ebb and flow of the first and second world wars in Eastern Europe * presents detailed information relating to consituent territories, elections, economic developments, land holding patterns for key individual countries in the inter-war years * provides crucial social and economic data, evidencing changes under communist domination * gives maps of the new states of the post-communist years with details of elections and economic indicators for Albania, Belarus, Bosnia-Hercegovina, Croatia, The Czech Republic, Estonia, Latvia, Lithuania, Macedonia, Moldova, Slovakia, and others. * contains an extensive glossary listing the major towns of the area under their linguistic variants

Pressestimmen "Combining a broad historical and theoretical framework with country-specific and issue-specific empirical studies; this multi-authored volume is by far the best, most stimulating contribution to our thinking about the Asia-Pacific challenge in the post-Cold War era. It offers a prime text for courses in international relations in general and East Asian or Asia-Pacific international relations in particular." - Professor Samuel S. Kim, Columbia University
