weaker than "Command in War" Von S OI read Command in War before, and that book is great. This book is slightly interesting i the first third. The middle was uninteresting. From page 295 on, it's great. On these pages, he describes quite exactly the situation of internationa ecurity we face today - especially terrorism. He wrote it in 1991.

KurzbeschreibungIn this impressive work, van Creveld considers man's use of technology over the past 4,000 years and its impact on military organization, weaponry, logistics, intelligence, communications, transportation, and command. This revised paperback edition has been updated to include an account of the range of technology in the recent Gulf War.From Publishers WeeklyIn tracing the history of technology in the service of war from early times to the present, van Creveld organizes this major study by epochs: the Age of Tools, the Age of Machines, the Age of Systems and the Age of Automation. Chapters within each section explore the impact of technology on particular aspects of warfaresieges, mobilization, military professionalism, command of the air, naval warfareto cite but five of 20 categories. Major military inventions from chariots to ballistic missiles, and their integration with other arms, are discussed in chronological order, along with "civilian" inventions adapted to the military realm, such as the timepiece, the telegraph, the railway. Van Creveld ( Command in War ) goes beyond the hardware to examine how technology has affected strategy and tactics, intelligence, logistics, communications and command. With laudable clarity, he explains the application of nuclear energy and computer technology to the military, as well as the latest developments in electronic warfare and their possible deployment on future battlefields.
